

Stellar Edge™ and Stellar Edge™ RM Equipment Integration

January 2023

The Stellar Edge™ IoT controller is hardware agnostic and compatible across a wide range of protocols, power ranges and devices. With local caching capabilities, the controller protects against data loss during network outages. Hybridized local and cloud-based architecture enables control optimization via machine learning and ensures availability of real-time insights anytime, anywhere.

With 10 years of experience and monitoring thousands of devices across 20 countries, Stellar Edge has integrated with a broad range of equipment. The list below is not exhaustive as we are constantly adding new integrations. Please contact us for updates and note that typically, Stellar can integrate with any Modbus device.

Most commonly interfaced equipment.

- Power converters (incl. inverters, rectifiers, charge controllers, hybrid): Schneider, Vertiv (Emerson)
- Battery / BMS: SimpliPhi, BluePlanet, Hresys, Narada, KorePower
- Generator (Controller): DeepSea, DEIF, PowerZone (Generac)
- Meters: Eastron, AccuEnergy, SparkMeter, SteamaCo
- Load center control: SmartCB
- IO Expander: Siemens LOGO, Stride
- ATS: ASCO 300/7000

Additional equipment.

- Power converters: SMA, Outback, Victron, Growatt, SolArk,
- Battery / BMS: Schneider BMS, Outback, Growatt, Korepower
- Meters: HOP, Calin
- Generator (controller): Datakom, Kohler APM303, Polar

Stellar Microgrid OS Cloud (API) Integrations.

- Power converters (inverters, rectifiers, charge controllers, hybrid): Victron
- Meters: SparkMeter, SteamaCo, Hop
- Modems: Digi, InHand
- CRM: Paygee
- Fuel monitor: Tank Utility
